EDUCATION

Techno India University — Bachelors in Computer Applications (BCA) *Sep 2024 – May 2028*
CGPA: **9.3/10** (through, semester 4) *Kolkata, India*

PROJECTS

Waverly — React.js, Javascript, Node.js, MongoDB Live Demo | Github

- **Engineered** a cross-platform social networking app with **React**, enabling college students to build professional profiles, showcase projects, share experiences, and discover career opportunities.
- **Developed** a **Node.js/JavaScript backend** with RESTful APIs and MongoDB, powering user profiles, posts, connections, and personalized content workflows.
- **Implemented** social networking features including **user discovery, connection management, profile interactions, and content sharing**, enabling students to build and expand their professional network.
- **Integrated** React Native frontend workflows with backend services and authentication APIs, delivering a scalable mobile architecture and seamless cross-platform user experience.

StatiQ — Startup Hiring Marketplace — React.js, Node.js, Express, MongoDB, JWT, Tailwind CSS Live Demo | Github

- **Independently engineered** a Wellfound-style hiring marketplace connecting job seekers with startups, enabling job discovery, company profiles, applications, saved jobs, and job alerts through a dark-themed responsive interface.
- **Developed** JWT-based authentication with seeker/employer roles and protected routes, powering user profiles, résumé uploads, notifications, and personalized seeker/employer dashboards.
- **Built** employer workflows for posting and managing jobs (draft/publish/close), running an applicant pipeline (New → Shortlisted → Interview → Offer → Rejected), and editing rich company brand pages with logo uploads and WYSIWYG content.
- **Designed** RESTful APIs with Express and MongoDB for jobs, applications, companies, alerts, and notifications — with input validation, rate limiting, and secured file serving — and deployed the production frontend on Vercel.

Shortly - URL Shortener Platform — React.js, MongoDB, Express, JWT, Tailwind CSS Live Demo | Github

- **Engineered** a full-stack URL shortening platform using **MERN**, enabling users to generate, customize, and manage short links through a responsive web interface.
- **Implemented** JWT-based authentication and protected user dashboards, enabling personalized URL management with secure login/signup workflows.
- **Built** a persistent link-management system supporting **custom aliases, click tracking, URL deletion, and historical URL retrieval**, giving users complete control over generated links.
- **Designed** RESTful APIs with **Express and MongoDB** for URL creation, redirection, analytics, and user operations, and deployed the production application on **Vercel**.

SKILLS

Languages: C++, Python, JavaScript, TypeScript, SQL.
Frameworks & Libraries: React.js, React Native, Node.js , Express.js.
Databases & Tools: MongoDB, Supabase, Git, GitHub, REST APIs, Cursor.
AI/ML & Data: PyTorch, Numpy, Pandas, RAG, Public APIs.

HACKATHONS & OPEN-SOURCE

SMART INDIA HACKATHON 2026 — Aarogya AI *kolkata · August 2026*

- **Engineered** Aarogya AI, a native mobile application that analyzes packaged-food ingredients through barcode/image scanning and identifies healthier alternatives based on nutritional composition.
- **Ranked among the Top 10 teams** at Smart India Hackathon 2026 by engineering Aarogya AI.

COURSEWORK

- Data Structures and Algorithms
- Computer Networks
- Database Management System
- Machine Learning
- Neural Networks
- Mathematics
